Medical-D

practical
protection bag

With the Medical-D® camera, anyone can take perfect photos for oral photography quickly and easily: by use of a special pre-programmed D-mode for mouth photos and a SMILE mode for facial photos.

You can take anti-glare photos with an optional add-on cross-polarization filter.

This lightweight camera makes full HD video recordings of the relationship or articulation. The touch screen on the back provides direct access to history and virtually unlimited magnifications.

Via WiFi, this camera can send the photos directly to a PC, laptop or mobile phone.

In short, a unique camera due to its simplicity, speed and high quality.
